SERVICENOW ITSM, CSM, FSM AND ITAM TRAINING PROGRAMME

Capstone Project Requirements Specification

From customer case to field visit to managed asset and software

Australia release | Individual assessment | 3 hours | Own instance

Document control

Document ID	CAP-SN-001
Version	1.0
Issue date	November 2026
Audience	Trainees who completed the ten-day programme (CSM, FSM, ITAM)
Owner	Programme owner / lead trainer
Classification	Internal, training use
Assessment mode	Individual, 3 hours, own ServiceNow Personal Developer Instance (PDI)

Contents

Section	Title
1	Purpose and overview
2	Rules and environment
3	Business scenario
4	Scope and time guide
5	Requirements (Parts A to E)
6	Deliverables and submission
7	Assessment and scoring
Appendix A	Naming convention and evidence template
Appendix B	Reviewer scoring sheet

1. Purpose and overview

This capstone confirms that a trainee can apply the skills from all ten days of the programme to one connected business scenario. Instead of testing each module separately, it asks the trainee to build, in their own ServiceNow instance, a small but complete chain: a customer problem is handled as a case, a field visit is arranged as a work order, and the resulting hardware change and the related software position are recorded in IT Asset Management.

This document states **what must exist and how it will be judged**. It deliberately does not say how to build it. Trainees are expected to use what they learned in the sessions and the programme materials.

Item	Detail
Duration	3 hours (180 minutes), including evidence capture
Format	Hands-on build in the trainee's own instance, plus an evidence pack (PDF)
Modules covered	CSM (Parts A), FSM (Part B), HAM-style asset lifecycle and CMDB reconciliation (Part C), SAM Foundation (Part D), cross-module trace (Part E)
Complexity	Simple to moderate. Every requirement has been designed to be achievable on a standard PDI with the training plugins
Not required	HAM Pro, SAM Pro, integrations, custom code, custom applications
Optional	Use of the Software Asset Workspace and reconciliation (up to 5 bonus points, no penalty if it does not work)
Pass mark	70 out of 100

Learning outcomes assessed

- Set up customer data (account, contacts, service entitlement) and run a case through its lifecycle with knowledge and SLA support.
- Describe and configure a simple playbook for a repeatable customer process.
- Hand a case off to field service as a work order with sequenced, skill-based tasks.
- Create and manage hardware assets, models, stockrooms and CIs, and reconcile asset and CMDB records using a match key.
- Apply lifecycle states correctly when a device is deployed, returned and retired.
- Interpret software installations against entitlements, and recommend an action.
- Trace one customer problem across CSM, FSM and ITAM and explain the data flow.

2. Rules and environment

Topic	Rule
Instance	Each trainee works only in their own instance, logged in with an administrator account. Do not use shared or production environments.
Release	Australia release. The instance must have the training plugins active (CSM, FSM, Asset Management, SAM Foundation). The Software Asset Workspace and SAM Pro may be installed but are optional.
HAM Pro	Not available and not required. Do not attempt to install or use it.
Naming	Every record you create must start with **CAP-** followed by your initials, for example **CAP-AB**. See Appendix A. Records without the prefix are not marked.
Data	Use fictional data only. Do not enter real names, emails, phone numbers or serial numbers of any person or company.
Materials	Open book: programme slides, trainer guides, lab guides, your own notes and the official ServiceNow documentation are allowed.

Topic	Rule
Independence	Work alone. Do not share instance access, screenshots or answers. Use of AI assistants or messaging with other people during the assessment is not permitted unless the programme owner states otherwise.
Trainer support	The trainer answers questions about the wording of requirements and reports instance outages. The trainer does not give build steps or hints during the assessment.
Unavailable features	If a feature is not available or not working in your instance, do not stop. Capture a screenshot of the issue, complete the nearest alternative that is possible, and describe the gap in your evidence pack. Partial credit applies.
Time	Hard stop at 3 hours. Submit what you have. Incomplete requirements are marked on the evidence provided.

3. Business scenario

Brightwave Business Solutions is a fictional managed technology provider. It supports small business customers with laptops, monitors and everyday software. Customers contact Brightwave when a device fails. A customer service agent opens a case. If the problem needs a visit, a field technician is sent with a replacement device. After the visit, Brightwave must make sure its asset, configuration and software records are correct, because the customer is billed for devices and licences and Brightwave is audited by its software suppliers.

Your role: you are the Brightwave ServiceNow specialist. You must set up the customer, resolve one customer problem from first contact to closure, dispatch the field visit, swap the device in the asset records, check that the CMDB agrees with the asset records, and report on the software position of the device.

The story you will implement

Customer: Northwind Dental Group (fictional). Contact: a practice manager. A second contact is the practice IT lead.
Problem: the practice manager's laptop will not power on. It is covered by the customer's service contract.
Response: a case is created and worked using a knowledge article. A playbook guides the device replacement process. A work order with two tasks sends a technician to diagnose and replace the laptop.
Asset outcome: a replacement laptop is deployed, the faulty laptop is retired, and CI records match the assets.
Software outcome: one software product is checked for how many installations exist versus licences owned, and you recommend what Brightwave should do.

4. Scope and time guide

Part	Module focus	Suggested time	Points
Reading and planning	Read this document, plan the order of work	10 min	-
A. Customer and case	CSM data model, case lifecycle, knowledge, SLA, playbook	40 min	25
B. Field visit	FSM work order, tasks, skills, dispatch	35 min	25
C. Assets and CMDB	HAM lifecycle, models, stockrooms, CI link, reconciliation	40 min	25
D. Software position	SAM Foundation: installations, entitlements, position	25 min	15
E. Trace and reflection	Cross-module data flow and report	15 min	10
Evidence and buffer	Check evidence pack, fix gaps	15 min	-
Total		180 min	100 (+5 bonus)

Suggested order: A, then C, then B, then D, then E. Part B asks you to refer to assets and CIs from Part C, so doing C before B saves time. You may choose a different order.

5. Requirements

Each requirement lists what must be true in the instance, how it will be judged, and what evidence must appear in the evidence pack. Points are awarded for each acceptance criterion that is met. Replace **XX** with your initials.

Part A: Customer and case (CSM, 25 points)

A1	Customer set-up	6 pts
Requirement	Create the customer account **CAP-XX Northwind Dental Group** with two contacts that have different roles (a practice manager and an IT lead). Create a service contract for the account, with an entitlement that allows the customer to raise device support cases.	
Acceptance criteria	• The account exists and both contacts are linked to it. • The two contacts have different titles or roles. • A service contract for the account is active. • An entitlement is linked to the contract and the account.	
Evidence	Screenshot of the account showing its contacts. Screenshot of the contract and its entitlement.	

A2	Knowledge article	4 pts
Requirement	Create and publish a knowledge article titled **CAP-XX Laptop will not power on: first checks**. It must contain at least four numbered troubleshooting steps and be usable by customer service agents.	
Acceptance criteria	• The article is published. • The article has at least four numbered steps. • The article is visible to agents when they work a case.	
Evidence	Screenshot of the published article and its steps.	

A3	Case from first contact to resolution	10 pts
Requirement	Create a case for the practice manager that reports the laptop failure. Categorise and prioritise it appropriately, assign it to a suitable group, attach the knowledge article, and make sure the case is covered by the entitlement and has an SLA. Progress the case through its lifecycle to **Resolved** after the field visit in Part B is complete.	
Acceptance criteria	• The case is linked to the account, contact and entitlement or contract. • Category, priority and assignment group are set and sensible for the problem. • The knowledge article is attached to the case. • An SLA is attached and its status can be seen on the case. • The case shows work notes or comments that describe the problem and the resolution. • The case ends in the Resolved state (or the nearest state in your configuration) after the work order is complete.	
Evidence	Screenshots of the case at creation, with the article attached, and at resolution. Screenshot of the SLA.	

A4	Simple playbook	5 pts
Requirement	Configure a playbook named **CAP-XX Device replacement** for cases about device failure. It must have at least three steps, including one manual step for an agent and one step that communicates with the customer. Show that the playbook is used on, or can be triggered for, your case.	
Acceptance criteria	• The playbook is created and published or activated. • It contains at least three steps. • At least one step is manual and one involves customer communication. • It is linked to your case, or you demonstrate how it starts.	
Evidence	Screenshots of the playbook steps and of your case with the playbook shown. If your instance cannot run playbooks, screenshot the configuration and explain the limitation.	

Part B: Field visit (FSM, 25 points)

B1	Work order from the case	6 pts
Requirement	Create a work order for the field visit from your case. It must show the customer, a service location (create a location named **CAP-XX Northwind Dental Clinic**), a clear description, and the link to your case.	
Acceptance criteria	• A work order exists and is linked to your case. • Company and location are filled in. • The description names the faulty laptop and the customer contact. • The work order is assigned or ready to be assigned for dispatch.	
Evidence	Screenshot of the work order header and its link to the case.	

B2	Tasks, skills and dispatch	12 pts
Requirement	Add two tasks to the work order: **CAP-XX Diagnose laptop** and **CAP-XX Replace laptop and verify**. The second task must not start before the first one is finished. Each task needs at least one required skill (existing or created, named with CAP-XX). Create one technician with the matching skill and assign both tasks to that technician. Take both tasks and the work order to completion.	
Acceptance criteria	• Two tasks exist under the work order. • The second task depends on the first task. • Each task has at least one skill requirement. • A technician with the matching skill exists and both tasks are assigned. • The tasks move through states in a valid order and are completed. • The work order ends in a completed or closed state.	
Evidence	Screenshots of the task list with dependency, the skill requirements, the assignment, and the final states.	

B3	Device on the work order	7 pts
Requirement	After completing Part C, show on the work order the device it concerned: record the faulty laptop as the affected asset or CI, and the replacement laptop in the work notes or in the field your configuration provides for it.	
Acceptance criteria	• The faulty laptop is referenced as the affected CI or asset. • The replacement laptop is recorded on the work order. • Both references match the records created in Part C.	
Evidence	Screenshot of the work order showing the affected CI or asset and the replacement note.	

Part C: Assets and CMDB (ITAM, 25 points)

C1	Master data	4 pts
Requirement	Create a manufacturer **CAP-XX TechSource**, a hardware model **CAP-XX Laptop 15** in the Computer category, and a stockroom **CAP-XX Stockroom** with a manager.	
Acceptance criteria	• The manufacturer is marked as a manufacturer. • The model uses the manufacturer and the Computer category. • The stockroom exists and has a manager.	
Evidence	Screenshots of the model and the stockroom.	

C2	Two laptops	7 pts
Requirement	Create two hardware assets from your model: the **faulty laptop** (tag **CAP-XX-OLD-001**) and the **replacement laptop** (tag **CAP-XX-NEW-001**). Give each a unique fictional serial number. At the start of your scenario the faulty laptop is in use by the customer contact and the replacement is waiting in your stockroom.	
Acceptance criteria	• Both assets exist with the correct tags and different serial numbers. • The faulty laptop is In use and assigned to the practice manager contact (or a user created for that person). • The replacement laptop is In stock in your stockroom. • Both assets use your model.	
Evidence	Screenshot of the asset list filtered to your two tags, and screenshot of each asset form.	

C3	CI link and reconciliation	8 pts
Requirement	Make sure each laptop has a matching CI linked to it. Then create **one deliberate mismatch** of your choice (an asset without a CI, a CI without an asset, or two CIs with the same serial number). Detect it with a list filter, then resolve it. Use the serial number as the match key.	
Acceptance criteria	• Both laptops are linked to CIs, and the CI records point back to the assets. • One mismatch was created and named in your evidence. • The mismatch was found using a filter that is visible in your screenshot. • The mismatch was resolved, and the same filter shows the fix. • The evidence states which match key you used and why.	
Evidence	Before and after screenshots of the filters. A short note of the mismatch type and fix.	

C4	Replacement lifecycle	6 pts
Requirement	Complete the device swap in the asset records: deploy the replacement laptop to the contact and return and retire the faulty laptop. The asset states and fields must tell a correct story.	
Acceptance criteria	• The replacement laptop is In use and assigned to the contact, with no stockroom. • The faulty laptop is no longer In use and ends in the Retired state (or the closest valid retired state). • The faulty laptop has no assigned user at the end. • The asset history shows the state changes.	
Evidence	Screenshots of both assets after the swap and of the history of one asset.	

Part D: Software position (SAM Foundation, 15 points)

D1	Installations	5 pts
Requirement	Pick one software product that has installations in your instance's software installation data. Record the product, its publisher, the number of installations, and the names of at least three computers that have it. Choose a product with at least five installations if one exists.	
Acceptance criteria	• The product and publisher are named. • The installation count is stated and matches the instance data. • At least three computer names are listed from the instance.	
Evidence	Screenshot of the filtered installation list with the row count visible.	

D2	Entitlement and recommendation	10 pts
Requirement	Record rights for that product by creating an entitlement against a software model for the product, using the licence metric **Per Device** and purchased rights that are **three fewer than your installation count** (or **one** if the count is three or fewer). Use a price of **100 per right** as an assumption. Calculate the licence position and write a recommendation.	
Acceptance criteria	• A software model exists for the product, and the entitlement is linked to it. • The metric and purchased rights follow the rule above. • The gap (installs minus rights) and the position (under-licensed, compliant or over-licensed) are calculated correctly. • The cost of closing the gap by buying rights is calculated using 100 per right. • A recommendation is given with one alternative to buying (for example remove or reclaim) and a reason.	
Evidence	Screenshot of the entitlement. A table in your evidence pack with installs, rights, gap, position, cost and recommendation.	

Optional bonus (up to 5 points): SAM Workspace

If the Software Asset Workspace works in your instance, run reconciliation for the publisher of your product and screenshot the resulting licence usage or results page for that product. Add two sentences comparing the result with your own calculation in D2. This is optional. If the Workspace or SAM Pro does not behave properly on your instance, state what happened and move on; there is no penalty.

Part E: Trace and reflection (10 points)

E1	Traceability table	6 pts
Requirement	Produce one table that traces the whole story with record identifiers: case, work order, tasks, faulty asset, replacement asset, both CIs, the customer contact and the software product you analysed. For each link, state which field or relationship connects the two records.	
Acceptance criteria	• The table contains every record type listed. • Record numbers or names match the instance. • Each link names the connecting field or relationship. • The CSM, FSM and ITAM sections of the chain are clearly labelled.	
Evidence	The table inside the evidence pack.	

E2	Reflection	4 pts
Requirement	Write one page that explains how data moved from CSM to FSM to ITAM in your project, and list three improvements you would make in a real implementation. Say which of them would use capabilities you did not have in this assessment (for example HAM Pro lifecycle automation or SAM Pro reclamation).	
Acceptance criteria	• The data flow explanation is correct and uses the project's own records as examples. • Three realistic improvements are listed. • At least one improvement names a Pro capability and says what it would add.	
Evidence	One page, maximum 400 words.	

6. Deliverables and submission

Deliverable	Description	Format
Configured instance	All records exist in your instance with the CAP-XX prefix. The reviewer may check your instance directly.	Live instance, kept available for 7 days after submission
Evidence pack	One document with a section for each requirement (A1 to E2). Each section has the requirement ID, screenshots, and short notes where requested.	PDF, maximum 30 pages
Completion checklist	Appendix A checklist with each requirement ticked.	Last page of the evidence pack
Notes on unavailable features	Any requirement you could not complete as written, with a screenshot of the problem and what you did instead.	One page, if needed

Evidence rules

- Every screenshot must show the record number or name and enough of the browser to show your instance name.
- Crop only to remove empty space. Do not edit or annotate in a way that hides content.
- Number each screenshot with the requirement ID, for example A3-2.
- Name the file **Capstone_FirstName_LastName_YYYYMMDD.pdf**.
- Submit to the address given by the programme owner before the 3-hour deadline.

> **Reviewer checks**
>
> The reviewer opens your instance and checks a sample of records against your evidence. If a screenshot and the instance disagree, the instance prevails.

7. Assessment and scoring

Part	Requirement	Points
A	A1 Customer set-up (6), A2 Knowledge (4), A3 Case (10), A4 Playbook (5)	25
B	B1 Work order (6), B2 Tasks, skills, dispatch (12), B3 Device on work order (7)	25
C	C1 Master data (4), C2 Two laptops (7), C3 CI link and reconciliation (8), C4 Lifecycle (6)	25
D	D1 Installations (5), D2 Entitlement and recommendation (10)	15
E	E1 Trace table (6), E2 Reflection (4)	10
Total		100
Bonus	SAM Workspace reconciliation (optional)	up to 5

How points are given

Level	Meaning	Points for a requirement
Full	Every acceptance criterion is met and evidenced	100%
Substantial	Most criteria met, minor gaps	70%
Partial	Some criteria met, or met but not evidenced	40%
Not met	Nothing usable	0%

Result	Total score
Distinction	90 and above
Merit	80 to 89
Pass	70 to 79
Not yet passed	Below 70. A re-assessment is arranged by the programme owner

The bonus can only replace lost points. The final score is never above 100. Records without the CAP-XX prefix are not marked. Evidence that does not show a record identifier may be scored as Partial.

Appendix A: Naming convention and evidence template

Naming convention (replace XX with your initials)

Record	Name
Account	CAP-XX Northwind Dental Group
Knowledge article	CAP-XX Laptop will not power on: first checks
Playbook	CAP-XX Device replacement
Location	CAP-XX Northwind Dental Clinic
Work order tasks	CAP-XX Diagnose laptop; CAP-XX Replace laptop and verify
Manufacturer	CAP-XX TechSource
Model	CAP-XX Laptop 15
Stockroom	CAP-XX Stockroom
Asset tags	CAP-XX-OLD-001 and CAP-XX-NEW-001
Anything else you create	Start the name with CAP-XX

Evidence template (one block per requirement)

Field	Content
Requirement ID	
Screenshot numbers	For example A3-1, A3-2
Record numbers or names	Case number, work order number, asset tags
Notes (max 3 lines)	Only where the requirement asks for a note, or to explain an unavailable feature

Completion checklist (tick when complete and evidenced)

	Requirement	Done
A	A1 A2 A3 A4	[ ] [ ] [ ] [ ]
B	B1 B2 B3	[ ] [ ] [ ]
C	C1 C2 C3 C4	[ ] [ ] [ ] [ ]
D	D1 D2 (bonus optional)	[ ] [ ] [ ]
E	E1 E2	[ ] [ ]

Appendix B: Reviewer scoring sheet

Trainee name: _____ Instance: _____ Reviewer: _____ Date: _____

ID	Requirement	Max	Level (F/S/P/N)	Score	Comment
A1	Customer set-up	6			
A2	Knowledge article	4			
A3	Case to resolution	10			
A4	Playbook	5			
B1	Work order from case	6			
B2	Tasks, skills, dispatch	12			
B3	Device on work order	7			
C1	Master data	4			
C2	Two laptops	7			
C3	CI link and reconciliation	8			
C4	Replacement lifecycle	6			
D1	Installations	5			
D2	Entitlement and recommendation	10			
E1	Traceability table	6			
E2	Reflection	4			
	Total	100			
Bonus	SAM Workspace (optional)	5			

Result: Distinction / Merit / Pass / Not yet passed. Reviewer signature: _____
